

A chiller door left open for 30 minutes a day wastes enough energy in a year to power a lighthouse for nearly 4 days.

Close it and you'll make all the difference.

For more ways to help combat climate change at work visit www.carbontrust.co.uk

Energy wasted from open chiller door = $0.2\text{kW} \times 30 \text{ minutes per day} \times 365 = 36.5\text{kWh}$. Lighthouse $0.4\text{kW} \times 24 \text{ hours} \times 4 = 38.4\text{kWh}$. For full calculation see www.carbontrust.co.uk/postercalculations
