

Organisation	South Warwickshire NHS Foundation Trust
Category	I.T.
Please detail your project below	SWFT embarked on a project with Certero to look at how PC Power Management could help reduce electricity usage across our estate. The software we use allows us to monitor and manage when PCs are in use and idle, giving us the ability to reduce unnecessary power used when PCs are left on overnight for example.
How has your project improved sustainable development within your organisation or community setting?	The project is being rolled out to the whole estate. Results so far have been extremely positive, with over 160,750 kWh of electricity saved resulting in a cost saving of £16,720. The ability to simply and effectively manage our energy waste is essential in understanding how we can improve and minimise our impact.
What role does sustainable development play within patient and staff services within your organisation?	Sustainable development is to play a core part of how we operate as a healthcare provider and large employer in the region. SWFT have begun a large programme to embed sustainability into each aspect of the Trusts activity, and also activity that affects the wider community. We understand the importance of ensuring our practices and workforce are fit for the future, from choosing sustainable products and considering whole life cycle costs to developing clinical pathways that help ensure our patients go home feeling happier and healthier, having had the best possible experience.
Who has led the way on sustainable development within your organisation?	This project has been successful due to the collaboration between the Facilities and IT departments. Our sustainability efforts are led by our Sustainable Development and Carbon Management teams, which bring together champions from across the organisations activities. The groups pool together expertise, experience and knowledge from both clinical and non-clinical groups to ensure every possible aspect of sustainable development is covered in the most effective way beneficial to the patient.
